

| | | Type of selection (selected neutral) | Sample of sequences | Notes |
|----------------------|-----|---|---|---|
| Diversity transient | 1.) | Classic sweep |  | only if sampled during sweep, lots of LD/hitchhiking |
| | 2.) | NFDS |  | longer timescales, more recomb., less linkage b/t selected and neutral |
| Diversity maintained | 3.) | Structure w/ divergent seln. pressures |  | longer timescales but recomb. depends on migration, which re-introduces neutral mutations to break down LD |
